

# **BBJ02 Grape Rotators**

**with corrosion resistance and exceptional visibility**

---

## ***Features***

Patented ring-gears with replaceable inserts  
High resistance to salt water  
High resistance to acids and chemicals

Smooth 360 degrees of continuous rotation  
Excellent visibility throughout  
Lower fork-stops to support load during rotation

**BBJ Rotators** are designed to withstand extreme conditions with a minimal amount of maintenance, due to a “patented” removable insert that replaces ball or roller bearings in the central ring-gear.

Elimination of the balls and the inner seals has dramatically increased rotator lifespan (protecting it from inner corrosion) while also increasing operator visibility. Perfect for vineyard applications.

For every application, no matter how severe, there is a BBJ Forklift Rotator capable of outperforming all others.
